

Cost & ManagementDECEMBER - 2020Q 14). EOQ :-

Sol:-
 Annual consumption, A = 6000 units
 Cost of order, B = RS. 60
 Cost per unit, C = RS. 80
 Annual Carrying, S = RS. 2

$$EOQ = \sqrt{2(AB)/C}$$

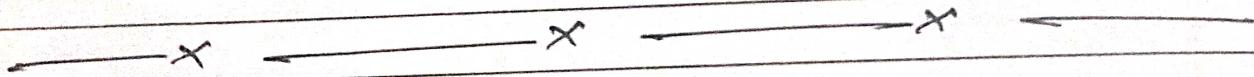

$$= \sqrt{2(6000 \times 60) / 80 \times 2}$$

$$= \sqrt{2(360000)} / 40$$

$$= \sqrt{720000} / 40$$

$$= \sqrt{18000}$$

$$= 134.16 \text{ units.}$$

Q 15). Halsey Plan & Rowan Plan :-

Sol:-
 Standard time, S = 36 hours
 Actual Time, TT = 30 hours
 Rate per hour, R = RS. 20

* Halsey Plan :-

$$WH = (JT \times R) + 50y \cdot (S - TT) \times R$$

$$\begin{aligned}
 &= (30 \times 10) + 50\% \cdot (36 - 30) \times 10 \\
 &= 300 + 50/100 \times (6) \times 10 \\
 &= 300 + 0.5 \times 60 \\
 &\approx 300 + 30 \\
 W.H. &= 330 \text{ RS/}
 \end{aligned}$$

* Ronan Plan:-

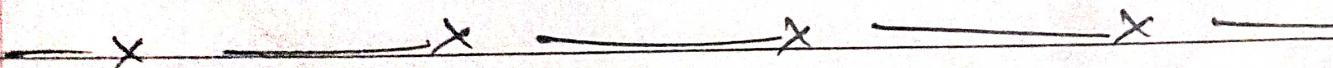

$$W.H. = T.T \times R + \text{Bonus}$$

$$\begin{aligned}
 \text{Bonus} &= (S - T.T/S) \times T.T \times R \\
 &= (36 - 30/36) \times 30 \times 10 \\
 &= 6/36 \times 300 \\
 &\approx 0.167 \times 300 \\
 &= 50.1 \text{ RS/}
 \end{aligned}$$

$$W.H. = 30 \times 10 + 50.1$$

$$= 300 + 50.1$$

$$= 350.1 \text{ RS/}$$

Q 18). Production budget :-

Sol:-

Production budget for three months
to March 31, 2012

~~Production~~ ~~units~~

Particular	A	B	C	D	Total
Estimated sales	20000	25000	50000	10000	105000
Add (+)					
closing stock	4000	6000	11000	1000	22000
	24000	31000	61000	11000	127000
Less (-)					
opening stock	5000	6000	10000	1000	22000
Total	19000	25000	51000	10000	105000
No. of units

Q 21) Straight piece rate & Taylor's diff. piece rate :-

So:-

Standard production = $\frac{60}{12} = 5 \text{ units per hour}$

Factory day = 8 hours

Normal time rate = RS. 60

* Straight piece rate :-

= No. of pieces \times Rate per pieces.

per piece rate = Time Rate per hr / No. of pieces produced per hr

$$= 60/5 = \text{RS. } 12$$

$$x) = 360 \times 12 \Rightarrow 360 \cdot \text{RSF}$$

$$y) = 50 \times 12 \Rightarrow 600 \cdot \text{PSF}$$

* Taylor's diff. piece rate :-

* Standard output = No. of pieces per hr \times Total wt. H $\Rightarrow 5 \times 8 \Rightarrow 40$

x) = piece rate \times 80%.

$$= 360 \times \frac{80}{100}$$

$$= 360 \times 0.8 = \text{RS. } 288/-$$

y) = Piece rate, y \times 120%.

$$= 600 \times \frac{120}{100}$$

$$= 600 \times 1.2$$

$$= \text{RS. } 720/-$$

$\underline{x} \longrightarrow x \longrightarrow x \longrightarrow x \longrightarrow x$

December - 2020

Q 16) Machine hour rate :-

Sol:-

Particulars	Rupees (Rs)	Per month (166 hrs) (Rs)	per hour (Rs)
Standing charge		50	0.30
Running charge:			
Repair & maintenance		150	0.90
Depreciation <u>(12000 - 1200)</u>	<u>10000</u>	179.28	1.08
Power	(5x0.19)	157.7	0.95
Total		536.98	3.23

* Comprehensive machine hour Rate = _____ RS. 3.23----- x ----- x ----- x ----- x -----

Q. 21). Inventory Control:-

Min Consumption = 240 units per day

Max Consumption = 420 units per day

Nor Consumption = 300 units per day

Reorder period = 10 - 15 days

Min - Max

Nor reorder period = 12 days.

Reorder quantity = 3600 units

Sol:-

c) Reorder level:-

$$\begin{aligned} \text{Re-order level} &= \text{Max cons} \times \text{Max re-order} \\ &\quad \text{period} \\ &= 420 \times 15 \\ &= 6300 \text{ units} \end{aligned}$$

a) Maximum Stock = Re-order level + Re-order quantity
 level - (Min cons x min Re-order period)

$$\begin{aligned} &= 6300 + 3600 - (240 \times 10) \\ &= 9900 - 2400 \\ &= 7500 \text{ units} \end{aligned}$$

b) Minimum Stock = Re-order level - (Nor cons x Nor re-order period)

$$\begin{aligned} &= 6300 - (300 \times 12) \\ &= 6300 - 3600 \\ &= 2700 \text{ units} \end{aligned}$$

d) Average Stock level = min level + $\frac{1}{2} \times$ Re-order Qty

$$= 2700 + \frac{1}{2} \times 3600$$

$$= 2700 + 1800$$

$$= 4500 \text{ units}$$
